## Checking Existence of the Certificate

Note 1: The [Issued To], [Issued By] and [Expiration] in the screenshots are just examples and will be different from those for the actual certificate.  
Note 2: All screenshots are from Windows10 (Firefox 58.0).

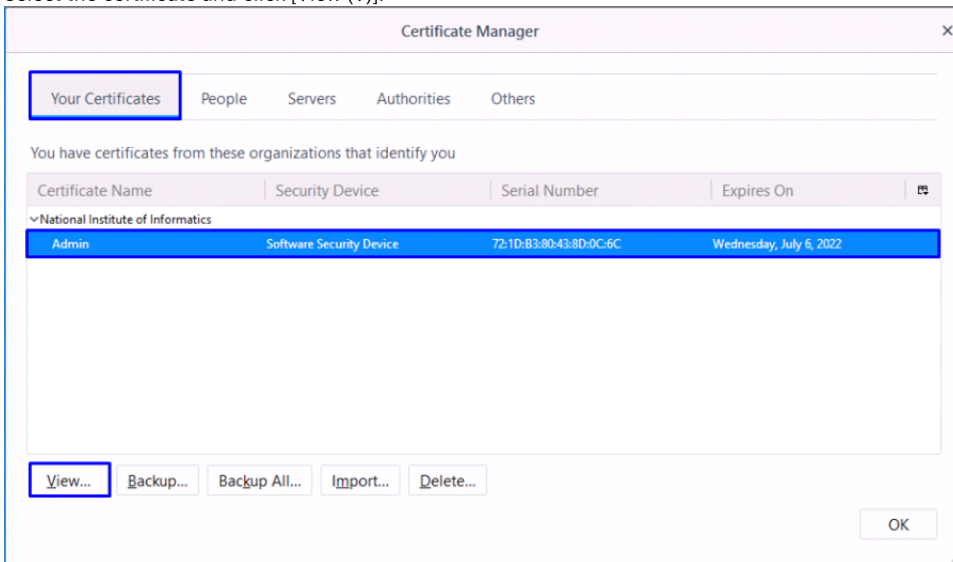

- 1. With Firefox, click on the [Menu] icon and select [Options].

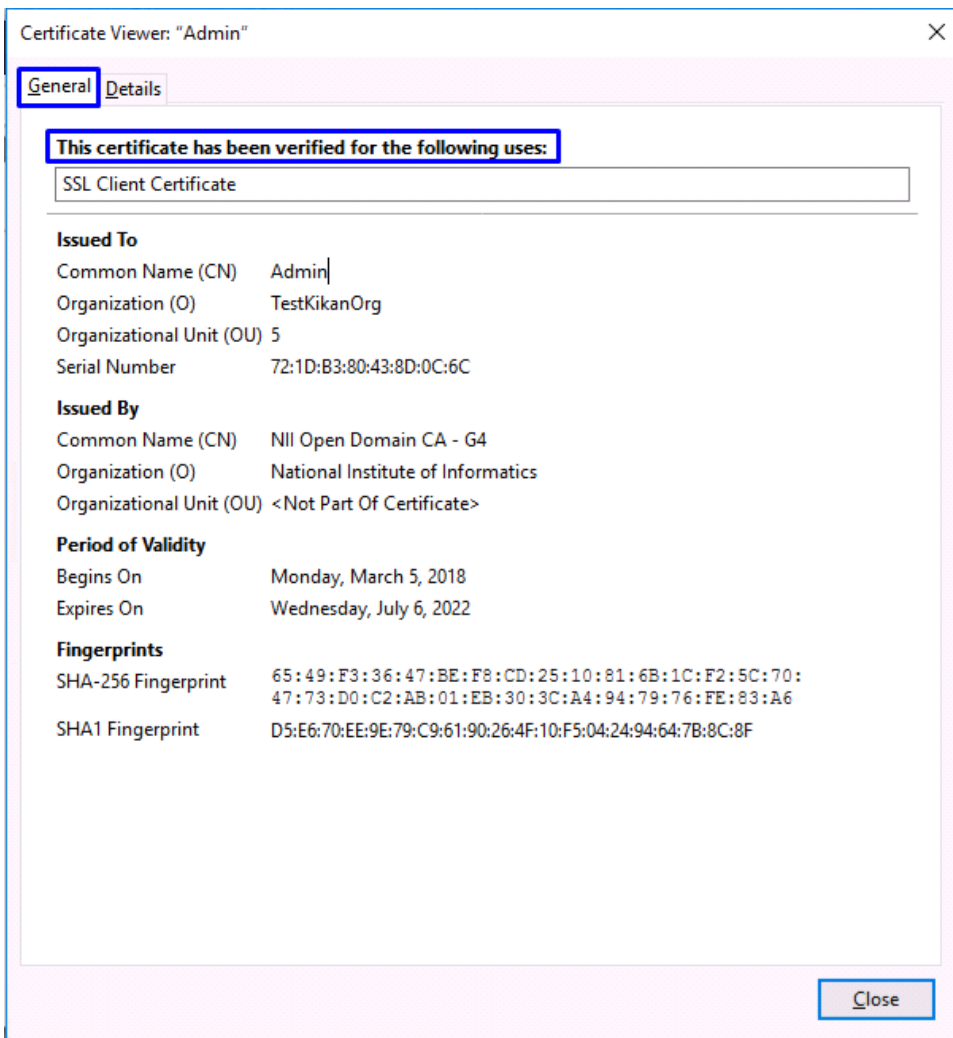

2. In the [Options] tab, select the [Privacy & Security] in the menu, and click [View Certificates...(C)].

3. In the [Certificate Manager] screen, click [Your Certificates] and make sure that the certificate appears in the list. Select the certificate and click [View (V)].

4. In the resulting [Certificate Viewer] dialog box, select the [General] tab and make sure that it says "This certificate has been verified for the following uses."

5. Select the [Details] tab and make sure that all certificates from the Root CA through the client certificate are correctly chained.  
Note: The screenshot is an example and may show different path tree from the actual state.
