Abstract		CH DE UK JP						
Older people constitute a growing proportion of the worldwide older people are often excluded from clinical research and are in intervention studies. This severely restricts the ability to ge research involving younger populations, which may impact on and the development of best practice guidelines for the care o piece outlines the challenges and practical difficulties experier ELDERMET project. The ELDERMET project has recruited almo years and older, across a range of health states from the very whom have been studied at multiple time points. All ELDERME	population. Despite this, generally underrepresented ineralise outcomes from the progression of knowledge of older people. This opinion nced and overcome by the st 500 subjects, aged 65 y frail to the very fit, half of ET subjects have participated
