

6. IdP Metadata Preparation

Metadata of IdP is automatically generated when installation. See `/opt/shibboleth-idp/metadata/idp-metadata.xml`.

Metadata Deployment

Deploy the metadata to be available from SP.

```
# mkdir /var/www/html/metadata  
# cp /opt/shibboleth-idp/metadata/idp-metadata.xml /var/www/html/metadata
```

After this instruction, restart tomcat and check log files as described in [the parent page](#). Then proceed to [SP installation](#).
