

# Serials Solutionsに関する情報

## 接続のお申し込み方法

Serials Solutions の Client Center(アドミンサイト)において、Credential-Based User Authentication Methodsの項目で

- Selected Authentication Method:でshibbolethを選択
- EntityId:で大学等機関のEntityID（不明な場合はIdP管理部署に確認）を登録

The screenshot shows the 'Configure User Authentication' interface. The 'Selected Authentication Method' is set to 'Shibboleth'. The 'Entity Id' field contains the URL 'https://auth01.ame.dpt.s.u-tokyo.ac.jp/idp/oidc/101' with a handwritten note '←大学IdPのエンティティID'. The 'IdP SSO Location' field is empty, with a red error message below it: 'One or more configured endpoints requires the IdP SSO Location, but it has not been configured.' Below this is a table for defining attributes, which is currently empty with the message 'This profile has no Shibboleth attributes defined.'

Attribute Name	Attribute Value
This profile has no Shibboleth attributes defined.
