

(English)User Consent Acquisition System: uApproveJP (uApprove Jet Pack)

[日本語版ページはこちら。](#)

About uApproveJP (uApprove Jet Pack)

Historical [uApprove](#) developed by SWITCH was a plugin for Shibboleth IdP to provide user consent feature on release of user's attributes. uApproveJP (Jet Pack), which is an extension of the uApprove, allows users to select attributes to be released. uApproveJP was called uApprove.jp formerly. uApproveJP works as follows:

1. Redirected to an IdP from an SP, and IdP requires a pair of username and password.

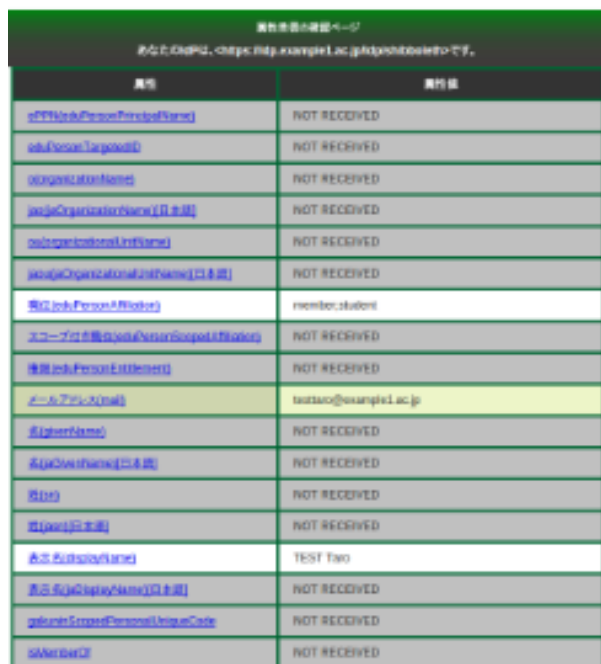

The screenshot shows a login interface for 'Our Identity Provider'. At the top, there is a placeholder for an organizational logo. Below this, the text 'Login to file sharing service' is displayed. The login form includes fields for 'Username' and 'Password', with links for 'Forgot your password?' and 'Need help?'. There are checkboxes for 'Don't Remember Login' and 'Clear prior granting of permission for release of your information to this service.'. A red 'Login' button is at the bottom. Below the button, there is a 'default SP description' field. At the very bottom, there is a grey bar with the text 'Insert your footer text here.'

2. All attributes to be sent are shown according to attribute-filter configuration. Optional attributes for the SP are shown with check boxes. User can control release of attributes by switching the check boxes. Mandatory attributes must be defined in metadata provided by the SP with [the isRequired boolean attribute of the RequestedAttribute element](#).

The screenshot shows a consent page titled 'Our Identity Provider'. It includes a placeholder for an organizational logo and a description of the service: 'You are about to access the service: File sharing service of Example1 University. Description as provided by this service: default SP description'. Below this is a table titled 'Information to be Provided to Service' with columns for attribute name, value, and a checkbox. The table lists 'Affiliation' (member, student), 'Display Name' (TEST fare), and 'Email' (testtaro@example1.ac.jp). Below the table, there is a text block asking for consent: 'The information above would be shared with the service if you proceed. Do you agree to release this information to the service every time you access it?'. There are three radio button options for consent duration: 'Ask me again at next login', 'Ask me again if information to be provided to this service changes', and 'Do not ask me again'. Each option has a corresponding 'I agree' statement. At the bottom, there are 'Reject' and 'Accept' buttons.

This page is shown only first time of access to each SP unless value of any attributes is changed. You can also request to show the page again by checking "Reset my attribute release approvals." at entering username/password.

3. Mandatory attributes and selected optional attributes are sent to the SP.
